

Transwater Water Response Team

We are ready to lend a hand!

Challenging times call for creative thinking and smart decision making! Current events on the health and economic landscape have each of us evaluating how to best use all available resources.

While we are very focused on our core business of deploying and maintaining technology solutions for affordable mapping and monitoring of critical water assets, we also know that in times like these you may need an extra hand!

As budgets are strained, expenses reduced and difficult decisions are made in regard to the number of resources you have counted on in the past, you will have to find ways to do more with less!

Transwater has prepped our team for a new level of action and responsiveness as our current and future clients find themselves in need of extra assistance! From something as technical as developing a complete water asset mapping & monitoring solution to the simple act of being available to

turn a valve that needs to be opened or reading a meter that needs to be verified, think of us as on-demand extension of your team. We are here to help.

Give us a call! We already have an established business relationship with you and your company and can offer competitive rates for deploying our response team to assist with activities you need to support your field operations!

We know things will change and know things will get better! In the meantime, let's all work together to protect everything we have all worked so hard to build!

HOW CAN WE HELP?

The fact is there will be things you still need to do and you may be short handed . Thinking in that way, here are just some of the ideas we have come with about simple ways we may can help:

- Read a meter
- Check a water well
- Open/Close valves
- Inspect flow lines
- Collect a water sample
- Fix a poly leak
- Expedite supplies
- Change a meter battery
- Verify a pond level
- Identify a water leak
- Move a meter
- Inspect a pond for damage
- Check on equipment
- Asset condition photos
- Verify work activity
- Move idle equipment to yard
- Repair a pond liner
- Assist your crews with large projects

If you think of more ideas call us and let's discuss.

We want to be there when you need help!
